Subject Details: Physics HL Paper 2 Markscheme

Mark Allocation

Candidates are required to answer ALL questions. Maximum total = [90 marks].

1. Each row in the “Question” column relates to the smallest subpart of the question.
2. The maximum mark for each question subpart is indicated in the “Total” column.
3. Each marking point in the “Answers” column is shown by means of a tick (✓) at the end of the marking point.
4. A question subpart may have more marking points than the total allows. This will be indicated by “max” written after the mark in the “Total” column. The related rubric, if necessary, will be outlined in the “Notes” column.
5. For numerical answers, a correct answer with no working is awarded full marks UNLESS stated otherwise in the “Notes”. For correct numerical answers with working the working must be checked. If the working contains minor omissions or errors full marks are awarded. If the working contains wrong Physics or wrong method the correct answer obtained will be the result of numerical coincidence. In that case the answer is penalized.
6. An alternative wording is indicated in the “Answers” column by a slash (/). Either wording can be accepted.
7. An alternative answer is indicated in the “Answers” column by “OR” between the alternatives. Either answer can be accepted.
8. Words in angled brackets « » in the “Answers” column are not necessary to gain the mark.
9. The order of marking points does not have to be as in the “Answers” column, unless stated otherwise in the “Notes” column.
10. If the candidate’s answer has the same “meaning” or can be clearly interpreted as being of equivalent significance, detail and validity as that in the “Answers” column then award the mark.
11. Remember that many candidates are writing in a second language. Effective communication is more important than grammatical accuracy.
12. Occasionally, a part of a question may require an answer that is required for subsequent marking points. If an error is made in a marking point then it should be penalized. However, if the incorrect answer is used correctly in subsequent marking points then error carried forward (ECF) marks should be awarded. When marking, indicate this by adding ECF on the script. When ECF is not to be applied “Do not allow ECF” will be displayed in the “Notes” column.
13. Do not penalize candidates for errors in units or significant figures, unless it is specifically referred to in the “Notes” column.
14. Allow alternative formats such as c for rad or use of E for scientific notation.

7.	a	i	Weight and Buoyancy drawn in proper directions (by eye) and correctly identified ✓	<i>Allow any sensible identification of the forces (e.g. mg for F_g)</i> <i>Do not allow “gravity” for weight.</i>	1
7.	a	ii	Weight = $\rho_c \cdot A \cdot H \cdot g$ OR Buoyancy = $\rho_w \cdot A \cdot D \cdot g$ ✓ $\rho_c \cdot A \cdot H \cdot g = \rho_w \cdot A \cdot D \cdot g$ ✓ <<algebraic manipulation to show the relationship>>		2

7.	b		When cork is released, upthrust/buoyant force is larger than weight OR buoyant force is increased when cork submerged. ✓ «net» force/acceleration is proportional to displacement OR quotes $a = -\omega^2 x$ OR $a \propto -x$ ✓ «net» force/acceleration is in opposite direction of displacement OR «net» force/acceleration is directed towards equilibrium ✓		2 max
7.	c	i	solid state volume is less than liquid state OR molecules/particles/atoms are closer in solids so volume is smaller ✓ Same mass in smaller volume «so larger density» OR More mass per unit volume ✓		2
7.	c	ii	4 «°C» ✓	Allow 3.9 °C - 4.1 °C. Accept answer in Kelvin (e.g. 277 K) if proper unit shown.	1

7.	d	i	$\ll (H - 32) / H = 920 / 1030 \text{ so} \gg H = 300 \text{ «m» OR } D = 268 \text{ «m» } \checkmark$ $m = 920 \times 300 \times 4200 \text{ OR } 1.16 \times 10^9 \text{ «kg» } \checkmark$	<i>Must see either full substitution or answer to 3 or more significant figures.</i>	2
7.	d	ii	$\frac{1}{40} m_{12} = (\frac{1}{40} m + m)v \checkmark$ $v = 0.29 \text{ «m s}^{-1}\text{» } \checkmark$		2
7.	e	i	use of $\Delta T = 6 \text{ «}^\circ\text{C}\text{» } \checkmark$ $\frac{\Delta Q}{\Delta t A} = \ll \frac{2.3 \cdot 6}{0.019} = \gg 730 \text{ «W m}^{-2}\text{» } \checkmark$		2

7.	e	ii	$m = (\rho A)(22) = (1000)(A)(22) = 22000A$ AND $\Delta T = 2$ «°C» ✓ $Q/A = \langle mc\Delta T \rangle = (22)(1000)(4200 * 2) = 1.85 \times 10^8$ «J m ⁻² » OR $Q/A = \langle mL \rangle = (22)(1000)(330000) = 7.26 \times 10^9$ «J m ⁻² » ✓ $Q/A = 7.4 \times 10^9$ «J m ⁻² » ✓		3
7.	e	iii	«the thicker the layer the» lower the rate of transfer ✓		1
7.	e	iv	if solid water were denser than liquid, ice layer would sink OR water at 4°C sinks to bottom ✓ ice layer «would isolate water below ice to» maintain conditions «above freezing » ✓ this insulates the lake OR prevents the lake from freezing completely ✓		2 max
