Standard level

Paper 1B

12 May 2025

Zone A afternoon | Zone B afternoon | Zone C afternoon

Candidate session number

--	--	--	--	--	--	--	--	--	--

1 hour 30 minutes [Paper 1A and Paper 1B]

Instructions to candidates

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- The maximum mark for paper 1B is **[25 marks]**.
- The maximum mark for paper 1A and paper 1B is **[55 marks]**.

1. The image shows a cast of the lower surface of a leaf from a busy Lizzie (*Impatiens walleriana*) plant as seen under a light microscope with a magnification of $600\times$.

(a) On the image, label a guard cell.

[1]

(a) On the image, label a guard cell. [1]

(b) State how the magnification of the microscope was calculated. [1]

2. *Psammmonobiotus balticus* belongs to a group of protists (unicellular eukaryotic organisms) that have a shell surrounding most of the cell, which provides shelter from predators. The graph shows the frequency of varying shell lengths in a population of *P. balticus*.

P. balticus

10 μm 

7
6

(a) From the diagram,

(i) identify the range of shell length that is the mode. [1]

..... μm

(ii) identify the range that includes the individual with the median shell length. [1]

..... μm

(b) State, giving a reason, the type of variation shown by shell length. [2]

.....
.....
.....
.....

- (c) Mutations may increase variation within a species. Compare and contrast substitution and insertion mutations. [2]

.....

.....

.....

.....

- (d) Outline the reason that some species of protists are classified as mixotrophs. [1]

.....

.....

3. Scientists used MRI to calculate the speed of transmission of nerve impulses along axons of brain neurons.

(a) (i) Describe the relationship between speed of transmission and axon diameter.

[1]

- (a) (i) Describe the relationship between speed of transmission and axon diameter. [1]

.....

.....

- (ii) In a similar experiment, scientists determined an R^2 value of 0.92.
Comment on this result. [2]

.....

.....

.....

(Question 3 continued)

(b) Distinguish between the functions of sensory and motor neurons. [1]

.....

.....

(c) The transmission of nerve impulses along axons relies on a supply of energy.
Explain how ATP is adapted to perform this function. [3]

.....

.....

.....

.....

.....

.....

4. The table shows the nuclear DNA content of some plant and animal species.

Species scientific name	Common name	Chromosome number	Genome size / DNA million base pairs
<i>Apis mellifera</i>	honey bee	16	215
<i>Homo sapiens</i>	human	46	3080
<i>Ailurus fulgens</i>	red panda	36	2340
<i>Pinus sylvestris</i>	Scots pine	22	20 000
<i>Paris japonica</i>	canopy plant	40	150 000

(a) Suggest, giving a reason, whether gametes or somatic cells have been used to provide the information in the table.

[1]

(b) State **one** way in which chromosomes are classified to construct the karyotype of

.....

(b) State **one** way in which chromosomes are classified to construct the karyotype of an individual.

[1]

.....
.....

(c) Outline the role of histones in plant and animal chromosomes.

[1]

.....
.....

(Question 4 continued)

- (d) Using the data provided in the table, discuss whether genome size positively correlates to organism complexity. [2]

.....

.....

.....

.....
